PROFILE SUMMARY

Aspiring Python Full Stack Developer with a strong foundation in computer science and a passion for building dynamic and responsive web applications. Equipped with solid knowledge of both front-end and back-end technologies, eager to contribute to a collaborative team environment and gain practical experience in the industry.

PROJECTS

Bus Booking System in Python

The Bus Booking System is a comprehensive application designed to automate and simplify the process of booking bus tickets. This project aims to provide users with a convenient and efficient way to book bus tickets and manage their bookings. The system will be developed using Python.

Amazon Clone Using JavaScript

Creating an Amazon Clone Project using JavaScript is an excellent way to practice and enhance web development skills. An Amazon Clone project aims to replicate the core functionalities of an e-commerce platform like Amazon, where users can browse products, add items to a cart, and proceed to checkout. This project focuses on the frontend using JavaScript, HTML, and CSS

College Management System

The College Management System is designed to manage and streamline the operations of a college, including student registration, course management, faculty assignment, and grade tracking. The system uses SQL for database management to store, retrieve, and manipulate data.
